

Water Saving-Spread the word

Junior River Ranger Activity

How to spread the word

Create a poster to spread the message:

"Our rivers are important habitats for people and wildlife, and we can help protect them by saving water."

Share the poster at home, in your local community or online to spread the message and raise awareness of how, and why, we should save water at home. Below are some facts to get you started.

Every poster created and shared=

1

The water in our taps comes from the river and aquifers (underground water storage that feeds our rivers).

2

The average person in England uses 141 litres of water per day, our aim is to reduce that to 100 litres of water per day.

3

South-East England is water stressed, caused by climate change, water management, and lots of people in one area wasting too much water.

4

Our rivers are suffering with low flows, meaning they don't have enough water. This is damaging for the habitat, wildlife, and us.

5

We all have a responsibility to help protect our rivers by saving water at home.

Ask an adult to share on social media and tag the South East Rivers Trust to reach more people. Instagram and Facebook: [@southeastriverstrust](https://www.instagram.com/southeastriverstrust)
Twitter: [@SE_Rivers_Trust](https://twitter.com/SE_Rivers_Trust)

Top Tip-Check out the other Junior River Ranger water saving activities for more facts and actions to share.
